

Market Pretest Among Private Student OpenID Authentication

Florina-Adriana SANISLAV

Abstract

Social sites are representing today quick method of communication for millions of people, although present there are present unique challenges for authentication. Recently, Internet services have become more attractive and more users use them. The present study analyzes perceptions about OpenID of 450 students from different universities in Cluj-Napoca. The conclusion is that the students do not invest more in online shopping, but they consider useful the program OpenID, that accounts are safer and easier to use.

Biography

Sanislav Florina-Adriana, a student at the Faculty of Electronics, Telecommunications and Information Technology, in the fourth year. In July-August 2013, I did practice the Romanian Radio Broadcasting Company from Bucharest, for which I desire in the future to practice in such a place.
