# LogMonitor – W3C Log File Format Monitoring Tool

Ştefan Szalai DRAGOŞ, Marius Cristian URECHE

### Abstract

*As deployment of server applications is growing, the need for a better, more powerful and platform independent application for monitoring arises. This document presents the implementation of LogMonitor, a client-server application for monitoring logs, its advantages, disadvantages and its operating modes. Together with this document a demonstration using a real scenario can prove the statements here.*
